# Sona Khata

AI-POWERED GOLD ACCOUNTING & TRUST MANAGEMENT

A digital gold ledger connecting jewellers and karigars — tracking gold transactions, jewellery orders, wastage and payments with transparent records.

MAIN GOAL **Trust** **Transparency** **Fairness** between jewellers and karigars

## 1 The Problem → Our Solution

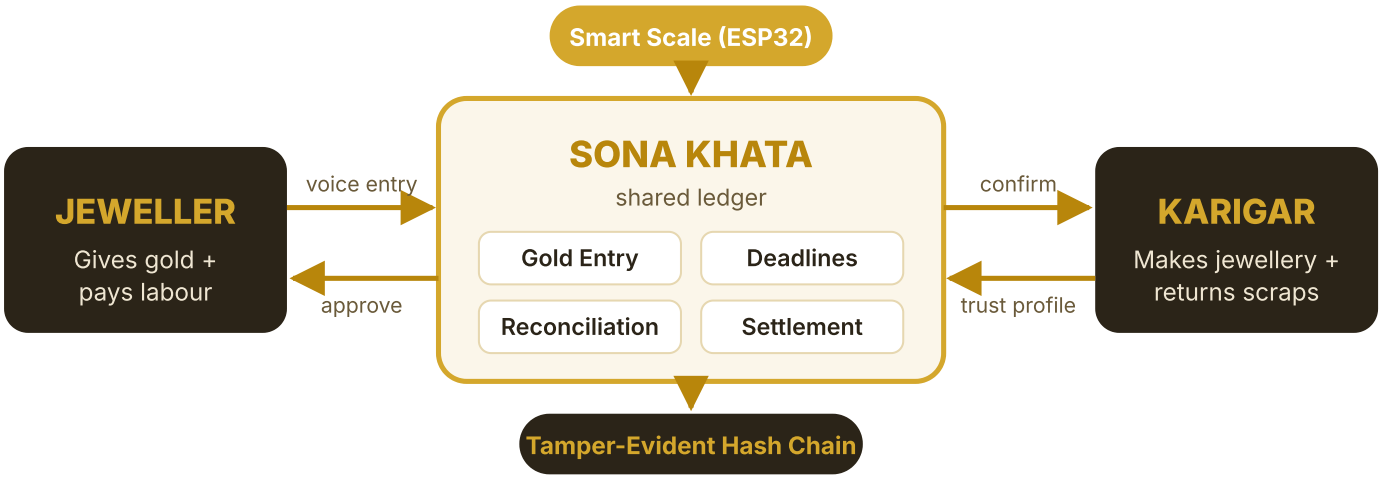

- No proper records of gold transactions
- Disagreements on gold weight & wastage
- Delayed jewellery deliveries
- Delayed labour payments
- Karigars can't easily access work history
- Hard for karigars to prove reliability

**SOLUTION**

A shared digital platform where both sides can **access, verify & approve** every transaction record.

Jeweller ⇄ Karigar

## 2 How Gold Moves Through Sona Khata

## 3 Business Model

| KARIGARS | JEWELLERS | FUTURE |
|---|---|---|
| **Free Access** | **Monthly Subscription** | **Gold Refiners & Financial Institutions** |

## 4 How It Works — 5 Steps & 5 AI Agents

WORKFLOW STEP | AI AGENT RESPONSIBLE

### 1 Gold Entry

- Jeweller sends WhatsApp voice message
- AI creates digital transaction record
- Karigar receives & confirms

**Intake Agent**
Voice → transaction record

### 2 Deadline Tracking

- Tracks delivery dates
- Automatic reminders
- Alerts on possible delays

**Deadline Agent**
Tracks dates, sends reminders

### 3 Gold Weight Reconciliation

Gold Given to karigar = Returned + Scraps / leftover + Agreed wastage

→ ✓ Matches → Settle
→ ⚑ Difference → Review

**Reconciliation Agent**
Checks weight, wastage & differences

### 4 Payment Settlement

Labour + balances › Settlement statement › Both approve › Payment

**Settlement Agent**
Labour charges & statements

### 5 Karigar Trust Profile

- Work & delivery history
- Completed orders
- On-time deliveries
- Shareable profile for new jewellers

**Trust Score Agent**
Performance & trust profiles

## 5 What Makes Sona Khata Special

- Both parties approve every transaction
- Voice-based gold entry
- Independent karigar accounts
- AI-powered gold reconciliation
- Automatic deadline tracking
- Shareable karigar trust profiles
- Smart digital weighing system
- Tamper-evident history

## 6 Smart Gold Weighing System

**1. Place Gold**
Karigar puts gold on digital scale

**2. Measure**
Scale measures the weight

**3. ESP32 Sends**
Microcontroller sends to app

**4. Auto-Record**
App records the weight

**5. Both View**
Shared measurement

- Reduces manual entry
- Improves weight accuracy
- More transparent transactions

## 7 Tamper-Evident Records

| Transaction #1 | |
|---|---|
| Hash | a3f9… |
| Prev | 0000… |
| Approved | J ✓ K ✓ |

→

| Transaction #2 | |
|---|---|
| Hash | 7c21… |
| Prev | a3f9… |
| Approved | J ✓ K ✓ |

→

| Transaction #3 | |
|---|---|
| Hash | e48b… |
| Prev | 7c21… |
| Approved | J ✓ K ✓ |

⇢✕

| Edited record ⚠ | |
|---|---|
| Hash | ???? |
| Prev | mismatch |
| Status | Detected |

- Unique digital hash for every transaction
- Linked to previous transactions
- Unauthorized changes detected
- Both parties' approvals maintained

## 8 Development Plan

**PHASE 1**
### Basic Prototype
- Jeweller & karigar accounts
- Record gold transactions
- Confirmation, return & reconciliation
- Settlement records

**PHASE 2**
### AI Integration
- Voice recognition
- Five AI agents
- Reminders & unusual wastage detection

**PHASE 3**
### Hardware
- Connect digital scale to ESP32
- Auto-capture & record gold weight

**PHASE 4**
### Final Application
- Jeweller & karigar dashboards
- Trust profiles
- Test complete application

**FINAL PROJECT STATEMENT**

Sona Khata is an AI-powered gold accounting and trust management platform that makes gold transactions between jewellers and karigars more transparent, accurate, and fair. It combines shared digital records, AI agents, and smart weighing hardware to build trust and protect both parties.
